(54) Title: VETERINARY APPARATUS AND METHOD OF USE

(57) Abstract: An apparatus for positioning an item in or near a natural orifice of a non-human animal, includes at least one resilient rod (2) having a first portion adapted to the shape of part of the animal's body spaced from the orifice and a second portion adapted to extend to or beyond the part of the animal's body in the region of the orifice. An anchoring arrangement 1 anchors the rod(s) (2) to the part of the animal's body spaced from the orifice. A transverse cross member (4) is adapted in use to be biased into contact with the animal's body in the region of the natural orifice as a result of the resilience of the rod(s) (2).
